PROGRESS ECONOMICS

Executive Summary

In early October 2017, the City of Greater Geraldton began a twelve month period of extended general retail trading hours in the local government area. This report looks at a range of measures and surveys to try to gauge the impacts of the trial, has been completed prior to the end of extended retail trial period, limiting the scope to evaluate the trial from independent data sources.

The community survey results demonstrate continued, majority community support for extended retail trading, particularly in younger and middle age categories. However, the business survey revealed more divergent opinion, with the trial supported by national general retailers and a small number of local businesses such as cafes and gift shops but opposed by independent general retailers and some local small businesses. Overall, there was not majority support among the businesses sampled. The ability to decipher the business impacts have also been hindered by the opening of new neighbourhood shopping centre with a national supermarket anchor, in the weeks prior to the extended retail trading period. This would naturally be expected to reduce visits to the CBD from Southern suburb residents as well as increase competition levels in the general retail sector. According to business responses to the survey, there were small employment losses to full time and casual employment, although these were partially offset by some modest part time gains. It is hard to attribute these losses given the new Wandina Centre opening, the trading extension and the general climate for the retail sector.

In terms of tourism, particularly cruise tourism it is difficult to establish definitive impacts within the reporting period since tourism data is typically published with long lags (and is also subject to averaging due to survey volatility). However, it was noted that there was only one Sunday cruise date during the trial that gave general retailers an opportunity to benefit from passing cruise trade due to deregulated hours, where previously they would have been prevented.

Overall, it is difficult to conclude within the reporting timelines requested whether deregulation has had a net benefit or cost on the local economy. The timelines through which such mechanisms could be expected to operate are naturally longer term, so it would be recommended that deregulation impacts are monitored and reviewed over a longer term horizon. In addition, it is recommended that some supportive efforts are directed towards the local independent retail sector to charter these competitive forces, since it is clearly in the interest of the local economy to have a vibrant, independent retail sector.

PROGRESS ECONOMICS

Background

In Western Australia, 'retail trading hours' provide times when retailers can open for business. Generally, the hours a business can open is determined by the business type. The hours for all these categories are governed by the Retail Trading Hours Act (the Act).

Some categories of retail-like business, such as cafes, restaurants, food takeaway and short term markets are not covered by the Act and have more flexible opening hours¹. All shops are regarded as 'general retail' shops unless they belong to a specific category and these categories include small retail shops, special retail shops, filling - service stations or motor vehicle shops.

In May 2017, City of Greater Geraldton Council submitted an application to State Government to trial deregulated 'General Retail' trading hours for 12 months, starting from 1 July 2017. Council also committed to a trial review process involving stakeholders:

- to test the effectiveness of deregulation as a means to stimulate economic activity and,
- to ensure it was meeting community needs and preferences.

This process would include a survey of community views on retail trading hours, with a report to Council by or before September 2018.

The twelve month trial was approved by State government in September 2017 and commenced on 6th October 2017. This report is thus being compiled before the end of the trial period.

In granting the trial, the Minister for Commerce and Industrial Relations office requested a comprehensive review of the trial be submitted no later than 30 July 2018, within the trial period.

The review was requested to identify, among other things, the trial's impact on:

- Local businesses, in particular small businesses;
- Employment, specifying employment type (i.e. casual, part-time, full-time);
- Tourism, including cruise ship visits;
- The local community, including community members' views.

The purpose of this report is to assess the impacts of a relaxation of general retail trading hours in the City of Greater Geraldton as requested by Minister Bill Johnston in granting the trial. This review has been undertaken by Progress Economics, an independent economics consultancy based in Geraldton, with resources provided by the City of Greater Geraldton.

PROGRESS ECONOMICS

While it is attempting to establish observable consequences from the trial less than twelve months since the trial began, it is expected that some of the impacts relating to the trial would play out over far longer timeframes than is allowed for within this report. For example, the full benefits resulting from the perception of Geraldton as being 'open for business' might be expected to take some time to be realised and for consequent elevated investment or tourist expenditures to feed through. This review is undertaken with a reporting deadline which falls before the end of the full extent of the trial of extended retail trading. This report can therefore only observe and comment on any effects that have been set in train within relatively short timeframes and reported or picked up by either survey processes or by independent data sources. Conventional independent data sources available through government agencies are largely published with significant lags and thus have very limited potential application within this report.

Any comments on more medium term dynamics that a change in retail trading regime might set in train will largely be informed by theory, hypothesis and experience from other markets.

Report Focus

Clearly, the focus of the trial is an expansion of trading hours for general retail shops. While the trial is specific about the category affected by the extension of trading, there are spill-over effects for other categories of trade and thus the review and in particular, the business survey also attempted to identify any noteworthy effects in other categories of retail and relevant trade.

Economic Context

The City of Greater Geraldton is the key regional centre for the Midwest region (population 54,019)². The recent 2016 census shows population in the Greater Geraldton local government area at 38,634. Comparing the Geraldton significant urban area census populations in 2016 and 2011 indicates relatively modest growth of approximately 0.92% between the 2016 and 2011 censuses³. The estimated resident population figures for 2017 compared to 2012 indicates zero growth over the recent five year period⁴. The local economy has been affected by reduced activity in the resources and construction sectors, but generally has additional exposure to agriculture, fishing, retail, logistics and multiple other sectors.

² Source: 2016 census, ABS website.

³ Note the LG amalgamation between City of Geraldton and Shire of Mullewa makes direct comparison of the LG measures between census dates more challenging.

⁴ Source: ABS.Stat tool, ABS website 2018. The ERP population is estimated using births and deaths data, and ABS models to incorporate migration estimates. Census is counted from census returns but does have a degree of missed coverage. Generally, it is believed to cover approx. 95% of the population, although this is understood to be larger in regions with more transient populations.

PROGRESS ECONOMICS

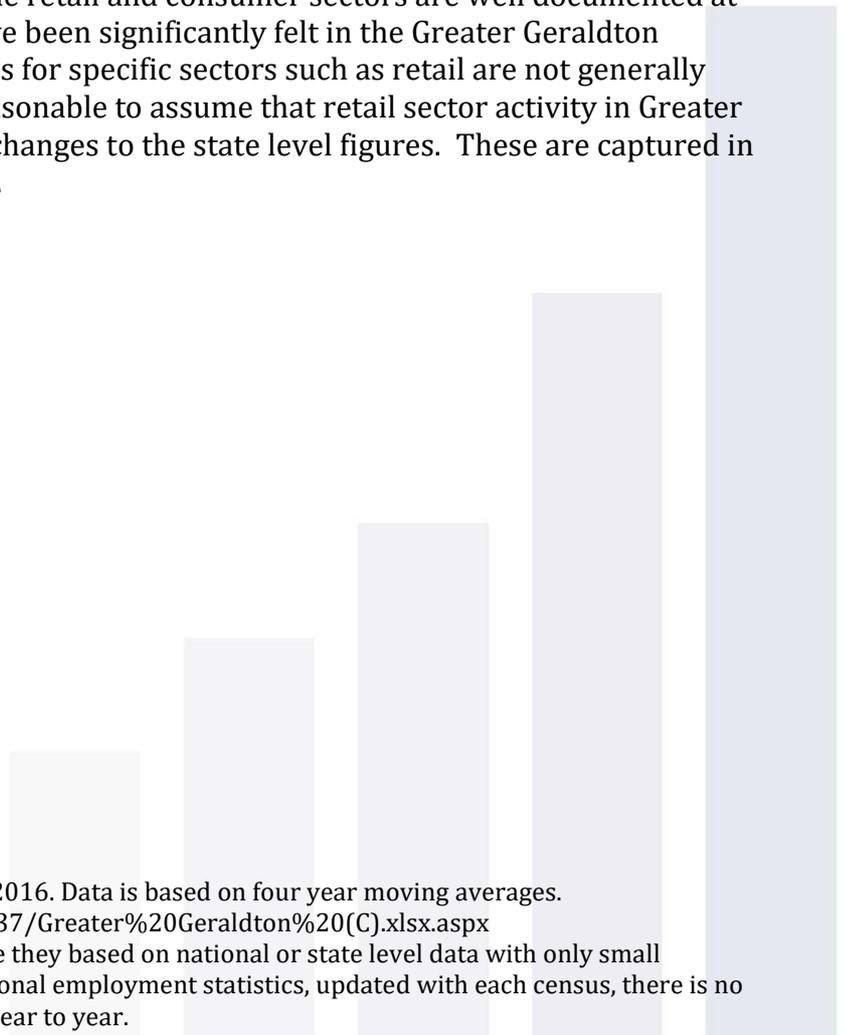

Efforts to grow tourism and to build attractiveness to visitors are also a focus for economic development activity. Tourism Research Australia estimates that from 2013-2016 Geraldton hosted an estimated 502,000 visitors per annum, staying an average total of 1,047,000 nights⁵. Of this an estimated 400,000 nights are accounted for by visitors staying with friends or relatives, 219,000 nights are spent in hotel accommodation and 98,000 in caravan parks/camping grounds.

The town is also a significant stop on West Coast (and other itinerary) cruising tours and in 2018 there are 12 cruise ship visits planned with an average capacity per ship of 1,110 passengers (plus 542 crew), with the largest ship potentially holding a capacity of 2,498 passengers (plus 850 crew).

General Trends Affecting the Retail Sector

Adverse factors currently impacting the retail and consumer sectors are well documented at the nationwide and state level and have been significantly felt in the Greater Geraldton regional centre. While annual statistics for specific sectors such as retail are not generally available⁶ for a specific region, it is reasonable to assume that retail sector activity in Greater Geraldton will reflect broadly similar changes to the state level figures. These are captured in the following retail sales growth chart.

Figure 1 Retail Sales Turnover Growth

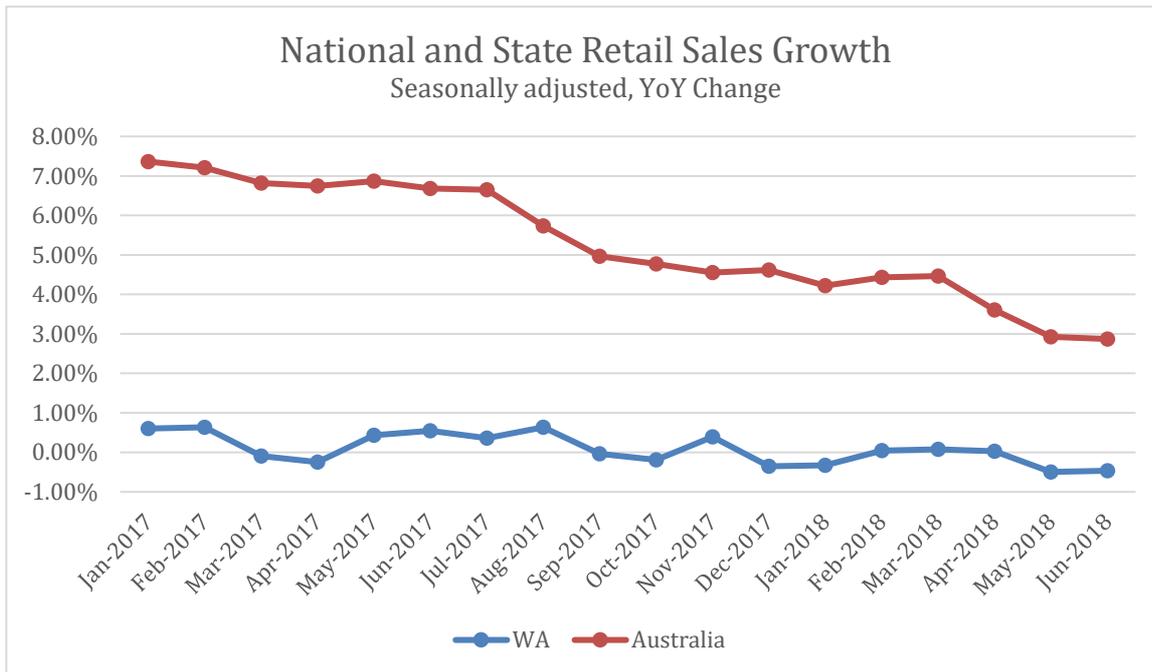

⁵ Source: Tourism Research Australia report, 2016. Data is based on four year moving averages. [https://www.tra.gov.au/ArticleDocuments/237/Greater%20Geraldton%20\(C\).xlsx.aspx](https://www.tra.gov.au/ArticleDocuments/237/Greater%20Geraldton%20(C).xlsx.aspx)

⁶ Note 'estimates' of these figures are but since they based on national or state level data with only small adjustments to the estimation made from regional employment statistics, updated with each census, there is no actual measured change at the regional level year to year.

PROGRESS ECONOMICS

Source: Data source ABS website, calculations Progress Economics.

As can be seen even at the national level retail sales growth is falling sharply, but a starker picture is clear in Western Australia with negative or negligible growth experienced over the last twelve months. Understandably, this has proven to be a poor backdrop for a local extension to retail trading hours in the City of Greater Geraldton.

Largely, this weakness has been accounted for by diminished economic activity impacting the jobs market, slower population growth in WA, slower household earnings growth and cost of living pressures impacting household spending levels. Uncertainty and low consumer confidence is impacting the willingness of employed WA consumers to spend. Similar factors are at play within the Greater Geraldton LGA.

Furthermore, while general retail sales activity is experiencing negligible growth at the state level, retailers are experiencing considerable competitive pressure from online retail and at the national level from new entrants to the domestic market, such as ALDI in the supermarket sector and other global clothing retail giants. While many of these businesses have not yet set up in Geraldton, it is clear that local consumers now have an ever larger choice of retailers to choose from domestically. In the retail arena, it is well publicised that this is putting pressure on traditional 'bricks and mortar' retailers to engage with customers through multiple (or omni-)channels and this serves to benefit those retailers who are able to achieve the scale and make the necessary investments to attempt this. For smaller retailers they must work much, much harder through multiple channels to hold on to their existing market share.

PROGRESS ECONOMICS

A recent nationwide update from Australia Post⁷, confirmed that by the end of 2017 online shopping accounted for 8% of traditional retail sales. Since globally this figure is understood to be approximately 12%, we might expect this growth to continue. While nationally, traditional retail sales grew by approximately 2.5% in 2017, online sales is reported to have grown by 18.7% over the same period. Since 1.2m Australians or approximately 10% of the national workforce are currently employed in retail, there will be significant impacts from disruption to the retail sector.

Similarly, according to the 2016 census, in Greater Geraldton there were 504 people employed in supermarkets and grocery stores and approximately 1800 employed in retail trade as a whole (10.8% of the local workforce). The local employed total workforce was recorded in the census as 16,701 in 2016 (and 17,256 in 2011, a 3.2% decline).

In terms of business numbers, according to Australian Business Register figures published through the ABS, in 2017 there were 192 retail trade businesses in Greater Geraldton, declining from 201 in 2016 and a high of 217 in 2013. Interestingly, while retail businesses appear to have suffered a decline, accommodation and food businesses have grown over the same timeframes from 106 in 213 to 119 in 2016 and 115 in 2017. The number of healthcare and social assistance businesses have also shown growth over the period.

Key Stakeholders and Key Issues

The issue of extended trading hours has a lengthy history in Greater Geraldton. In broad terms, national retailers with a local presence have been keen to see an extension to general retail locally, given that smaller and specialist retailers already have capacity under the Act. There is a view within the certain quarters of the community that more liberal trading regime within the LGA would serve to attract high profile national retail chains which currently do not have a presence in Geraldton and this in turn would strengthen Geraldton's position as a significant and growing regional centre.

Smaller local retailers working in those market segments also served by national retail chains have by and large opposed an extended general retail trading regime in Geraldton. However, there has been broad consensus across all retailers on the need for extended retail trading arrangements in the pre-Christmas trading period.

PROGRESS ECONOMICS

A key aspect of the general retail trading extension has been the issue of local resident sentiment towards the extension. The City of Greater Geraldton in its community plan is aiming:

- To promote 'Greater Geraldton and its potential business opportunities to facilitate targeted economic development',
- 'to foster a community where local business is supported' and,
- Is also aiming to 'revitalise the CBD economic, social and cultural vibrancy' among other things.

It has committed to 'engage broadly and proactively with the community' in order to achieve its governance aspirations enshrined in the plan.

Therefore, community surveys have formed a central part of the City's undertakings to secure an extension to general retail trading hours and to ensure that these undertakings are supported by the community. Details of these surveys and their outcomes can be found in the corresponding section below.

A final issue that also warrants discussion is the issue of significant store openings within Greater Geraldton that potentially have complicated the task of understanding the impacts of the extension to general retail trading hours. On 16 August 2017, less than two months before the commencement of the retail trading extension, Woolworths opened its second supermarket in Geraldton in Wandina, on the Northern fringes of the LGA's Seacrest suburb. The opening of such a significant retailer (in a new neighbourhood shopping centre, with attractive undercover parking) in the Southern suburban strip of the LGA, is also very likely to account for a reduction in visitation to the CBD of Geraldton, since local residents in the Tarcoola, Wandina and other nearby suburbs would logically be expected to divert some trips to the CBD to their neighbourhood store instead. As will be seen in subsequent data, there has been a drop in visitation levels recorded at a central location in the CBD, but it is challenging to meaningfully attribute this. It is likely that the opening of Woolworths Seacrest accounts for some diminution of activity for CBD based retailers. It is certainly the case that at least one of the larger centrally based supermarkets, general retailers acknowledged that this factor had an impact on their recent trading performance.

Finally, a further national supermarket retailer, Aldi, currently has a new Geraldton store under construction in Wonthella, located along the North West Coastal Highway. This does not have an impact for the period under review but certainly indicates that for local retailers' competition is set to increase further in the future and absent strong economic and population growth will likely mean even more difficult trading conditions for existing Geraldton retailers in certain retail sectors. While the addition of new national retailers may broaden the appeal of Geraldton as a regional centre for retail trade, it is unavoidable that there will be impacts for incumbent traders.

PROGRESS ECONOMICS

Data Sources, Methods and Results

Data Sources

The reporting deadline requested by State Government and the general paucity of timely published statistics for regional locations means that measurement of the trial's impact on local activity will not be easily captured within reporting timelines from standard data sources, such as the ABS, alone. As a consequence, local survey data and a range of other tools have been collected and interrogated to investigate the various impacts of the trial. These are detailed in the following results section for each source.

The most straight forward and directly accessed of these impacts of the trial is the impact on community, including community members views. As mentioned above this has been tackled through community phone surveys.

Community Survey Results

In 2017 and 2018, the City of Greater Geraldton allocated funding for the conduct of community surveys by independent third parties, to ensure it adequately captured community sentiment for extended trading.

The first of these community surveys was undertaken by phone in June 2017 and contacted 400 local residents over the age of 16, ensuring gender and age representation in line with local demographics⁸, as well as broad representation in each local government ward. This first survey, which took place prior to the retail trading extension, found that 74% of residents were in favour of the introduction of a retail trading extension. Majority support was found in all age categories (16-29 years, 30-44 years, 45-59 years and 60+ years), with the lowest level of 61% in the oldest age category, but still clearly supportive of extended retail trading.

The survey was repeated in July 2018, under the same conditions: a phone based survey, including 400 respondents with an equal male/ female split and age representation in line with local demographics, as well as representation of all City of Greater Geraldton wards.

The second survey, which was collected in the tenth month of the twelve month trial period, asked respondents whether they were in favour of extended general retail trading or preferred to revert to the previous regime. The second survey again found majority support for extended general retail trading hours in line with the Perth CBD, with 62.8% of residents in favour. Majority support clearly still remains in the younger age brackets and is unchanged in the 45-59 year age bracket.

⁸ For full details please refer to the Thinkfield Community Survey documents included in the appendix.

PROGRESS ECONOMICS

Figure 2 Summary of Community Survey Results – Support for Extended Trading Hours

Years	16-29	30-44	45-59	60 +	Survey Total
2017 Survey	81%	81%	71%	61%	74%
2018 Survey	72%	72%	71%	45%	63%

Source: Localise/ Thinkfield reports, 2017 and 2018.

Both surveys were contracted to Thinkfield, a dedicated third party market research consultancy, to ensure independence, pursuit of best practice, elimination of various biases in response collection and followed identical methodologies on each occasion.

Independent Business Survey

As indicated above, there are challenges to investigating the impacts of the trial on local business within the reports deadlines, since the relatively small amount of independent data which is published does not update in time. It was therefore necessary to conduct a local business survey to inform this aspect of the review process.

The targeted sample of business for the purposes of the survey was drawn to capture a range of dimensions, such as retail trading category, location, independent business versus chain and was also factored to include local businesses in non-retail categories. However, since there was no compulsion to participate in the survey, there were also no guarantees that the designed representation was reflected in the actual participation figures and hence there were some slight deviations in the actual response patterns.

Nonetheless, some 46 businesses participated (133 were invited to respond) and this sample captured the most significant supermarkets, both national chain and local independent retailers, across various locations in the City of Greater Geraldton.

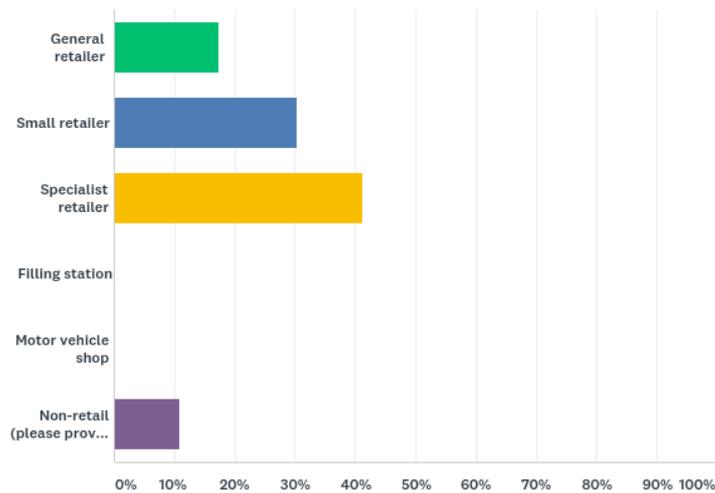

The first question therefore asked respondents to identify which business category they fell into and the results are shown in the chart below.

PROGRESS ECONOMICS

Figure 3 Responding business by category

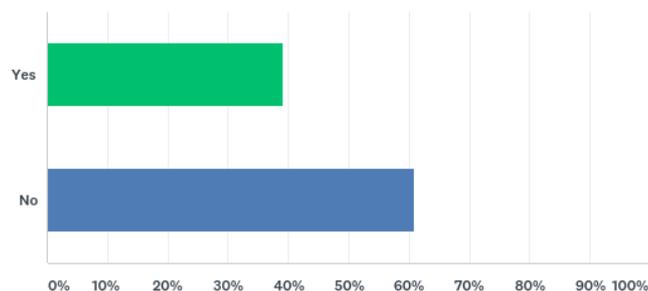

Q1 Can you please select which of the following categories best describes your business?

There were a total of 8 general retailers who responded, 14 small retailers, 19 specialist and 5 non-retailers. In terms of amended hours, 18 or fewer than 40% of all 46 responding businesses had amended their trading hours.

Figure 4 Business alignment with trading extension

Q2 Since 8th October 2017, general retailers in Geraldton have been able to extend their trading hours in line with those in the Perth CBD. Have you extended your business trading hours as a result of this change?

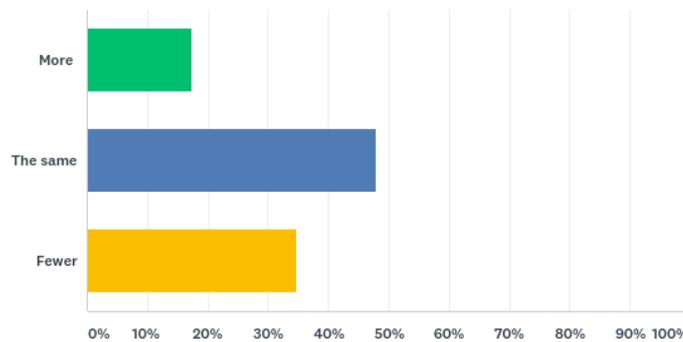

PROGRESS ECONOMICS

Figure 5 Overall employment impact

Q6 In full time equivalent terms (FTE), are you employing more staff or fewer staff during the general retail trading extension period?

According to the survey responses, almost 50% of businesses were employing the same amount of staff in full time equivalent (FTE) as before the retail trading extension. Thirty six percent of responding businesses claimed to be employing fewer staff and 16% claimed to be employing more.

The subsequent two questions attempted to quantify any shift in employment and each question was tackled by 43 of the 46 respondents. The following average and total figures per employment category per response/business were recorded for the pre-trial and during trial periods.

Figure 6 Respondent Supplied Employment Numbers

	Before Extended Trading		During Extended Trading	
	Average (per respondent)	Totals (all respondents)	Average (per respondent)	Totals (all respondents)
Full Time	10	400	9	360
Part Time	7	241	7	247
Casual	13	490	12	480

Source: Progress Economics

According to the data supplied by respondents there appears to be a small loss in employment between the two periods across two of the three employment categories (full time and casual), with part time employment category increasing slightly on aggregate.

PROGRESS ECONOMICS

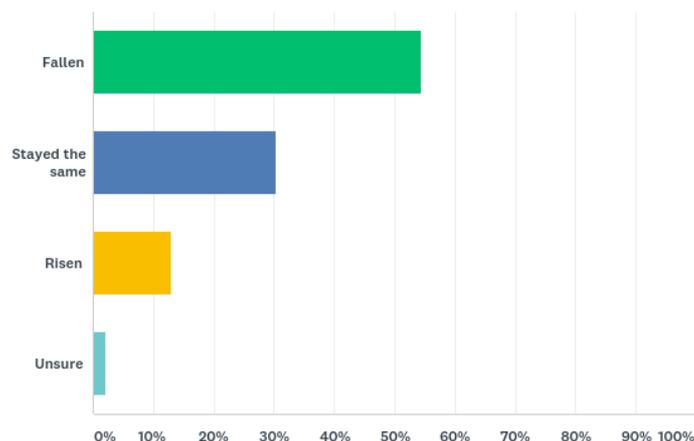

Interestingly, when asked if the wage bill had increased after allowing for inflation the most frequent response was that it had, despite a claim of falling employment within businesses. While this is superficially surprising, it is possibly a valid consequence of penalty rates on total employment cost given the impact of Sunday and longer trading hours for some businesses.

There were some noteworthy observations to be made from individual responses to the survey. For the independent 'small' supermarkets largely located at various neighbourhood nodes across the LGA, all reported a marked decline in their overall employment numbers. The recently opened national retailer in the non-CBD location reported a noticeable increase in its before and during employment numbers. Given that the 'before' figures would have been based on only a six week trading period, prior to the extension introduction, caution is warranted on the reliability of the those baseline figures. It is also likely that the opening of this store and the consequent loss of market share for other retailers accounts for some of the loss in trading activity for the other CBD based supermarkets. It is difficult to separate the impacts of the new store opening in Wandina out from more general effects on CBD and other supermarkets from changing resulting from the trading extension.

The next two questions asked for retailers to gauge the overall impact on sales and general profitability and the following results were recorded.

Figure 7 Impact on sales for respondent businesses

Q10 Over the course of the general retail trading extension period, would you say that your average monthly sales have...(please select the appropriate option)

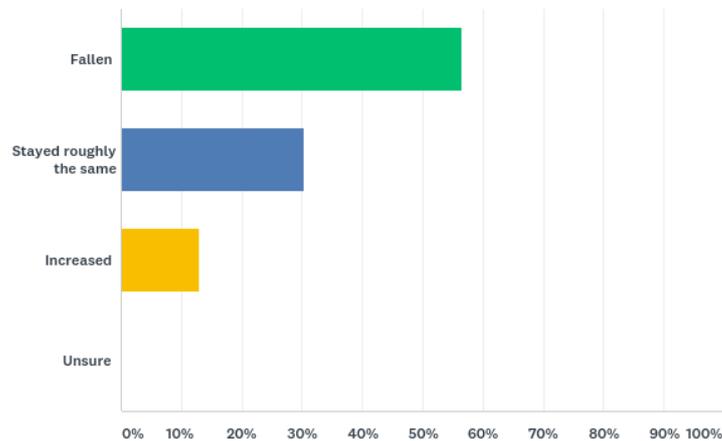

PROGRESS ECONOMICS

Figure 8 Impact on businesses' profits

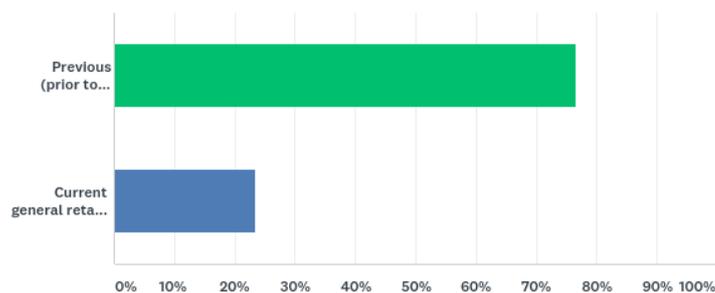

Q11 Compared to a year ago, would you say the profitability of your business has...(please select the appropriate option)

As can be seen, 54% of businesses pointed to a fall in sales and over 56% pointed to a fall in profits. Thirty per cent of business said sales had stayed the same and the same number said profits were constant. Thirteen percent of responding businesses pointed to increases in both sales and profits.

Figure 9 Respondents preference for trading hours

Q12 Bearing in mind that smaller or specialist retailer, filling stations and motor vehicle shops can open a wider range of hours, which trading hours would you support for the general retail trading category in Geraldton (please choose only one):

The respondents were also asked if they thought the trial had had a positive or negative

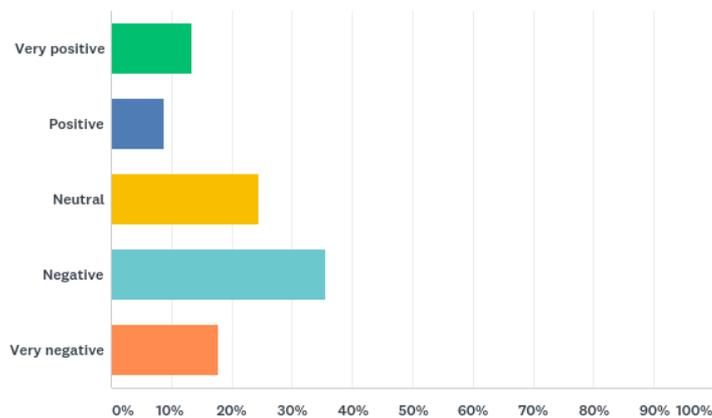

PROGRESS ECONOMICS

impact on their business. Over 53% said that it had a negative or very negative impact, only 22% said it had been positive and slightly over 24% said its impact was neutral.

Figure 10 General trial impact

Q13 Trying to allow for general factors which are impacting retail businesses Australia wide, what impact do you think the trading extension specifically has had on your business?

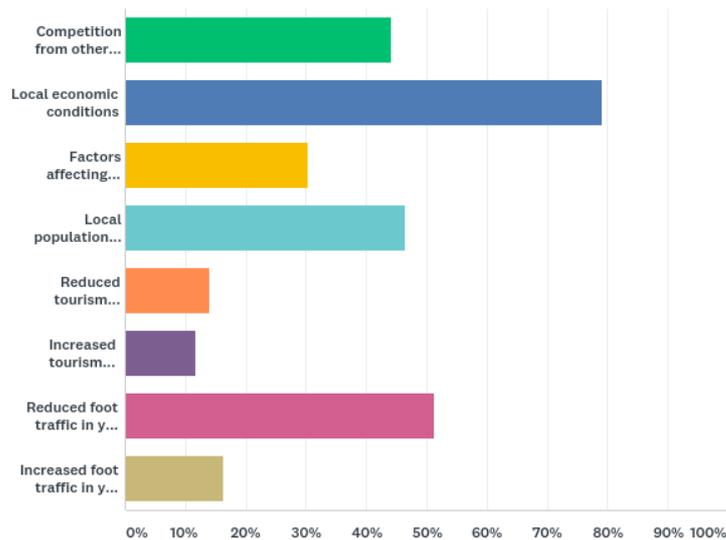

The following question gave respondents some choices about what they believed was contributing to their current business activity levels and the following responses were recorded. These are consistent with the general factors affecting retail discussed in the opening context section at the start of this document⁹.

⁹ Note selection choices were as follows:
 Competition from other types of business (e.g. internet based)
 Local economic conditions
 Factors affecting consumer spending more broadly
 Local population trends
 Reduced tourism activity
 Increased tourism activity
 Reduced foot traffic in your business location
 Increased foot traffic in your business location

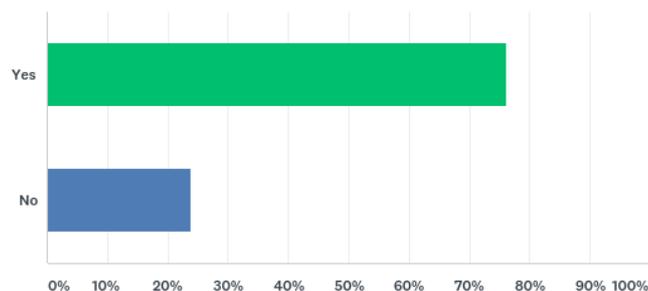

PROGRESS ECONOMICS

Q16 Which of the following possible factors do you think are contributing to your business's current activity levels?

In closing the respondents were asked to comment on whether they supplied goods to tourists and approximately 75% said they did. However, a similar share of respondents also suggested that there was no evidence that the retail trading extension was supported by tourists.

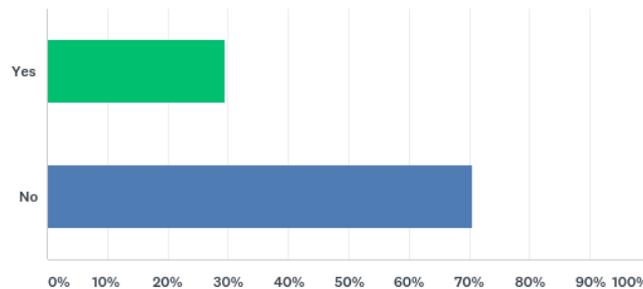

Q17 Finally, do you provide goods or services to tourists or other visitors and travellers?

PROGRESS ECONOMICS

Q18 Does your customer feedback from tourists and other visitors suggest that the extension to general retail trading hours is supported by them?

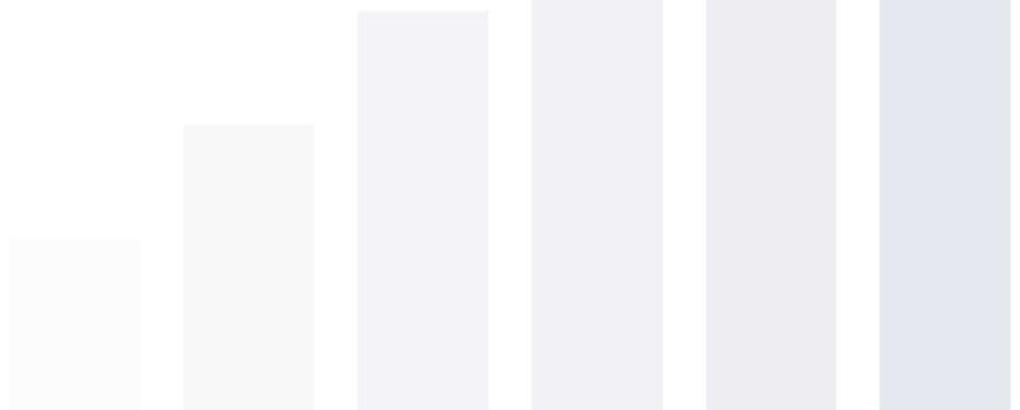

Taken across the cross section of 46 businesses responding to the survey, it would appear that the dominant voice is that trading through the period corresponding to the retail trading extension would not be supported by their tourism customers. Since this is not directly reported by those tourists themselves, caution is again warranted on the reliability of these responses.

Visitor Centre Data

The City of Greater Geraldton operates a visitor centre (marked on the map) at the Southern end of the Geraldton Foreshore, which serves as the central tourist information bureau. This centre also records daily visitor counts and thus is an additional source of statistics, more specifically on tourist activity levels.

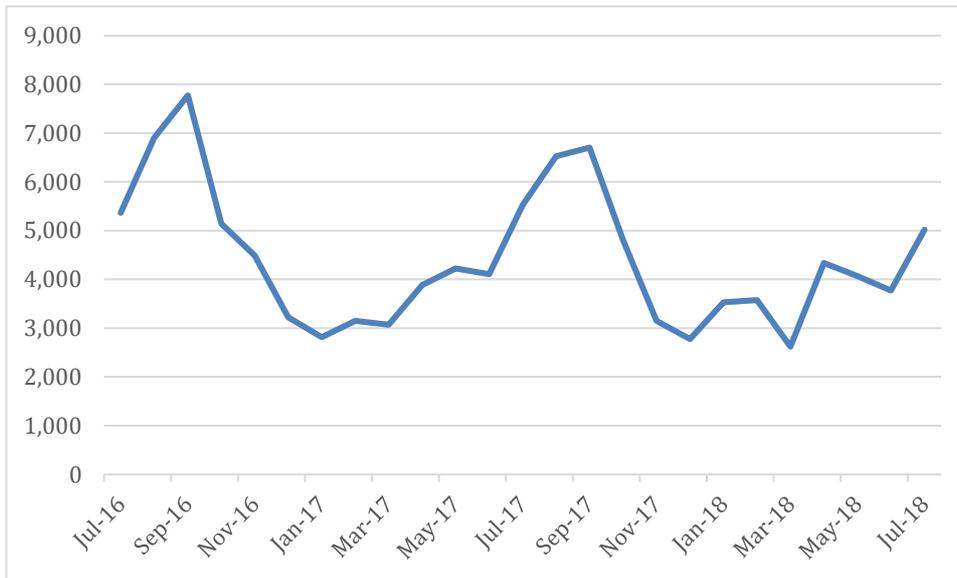

The chart below shows the monthly recorded door counts for the visitors centre, which tends to peak through the winter (wildflower) season in July to early September. Comparing the average monthly count over the first half of 2017 to the first half of 2018 (during the trading extension period) shows a modest improvement from 3,543 entrants per month to 3,650 entrants to the visitors' centre (3% increase).

PROGRESS ECONOMICS

Figure 11 Monthly Door Counts at Geraldton Visitor Centre

Source: City of Greater Geraldton, Progress Economics

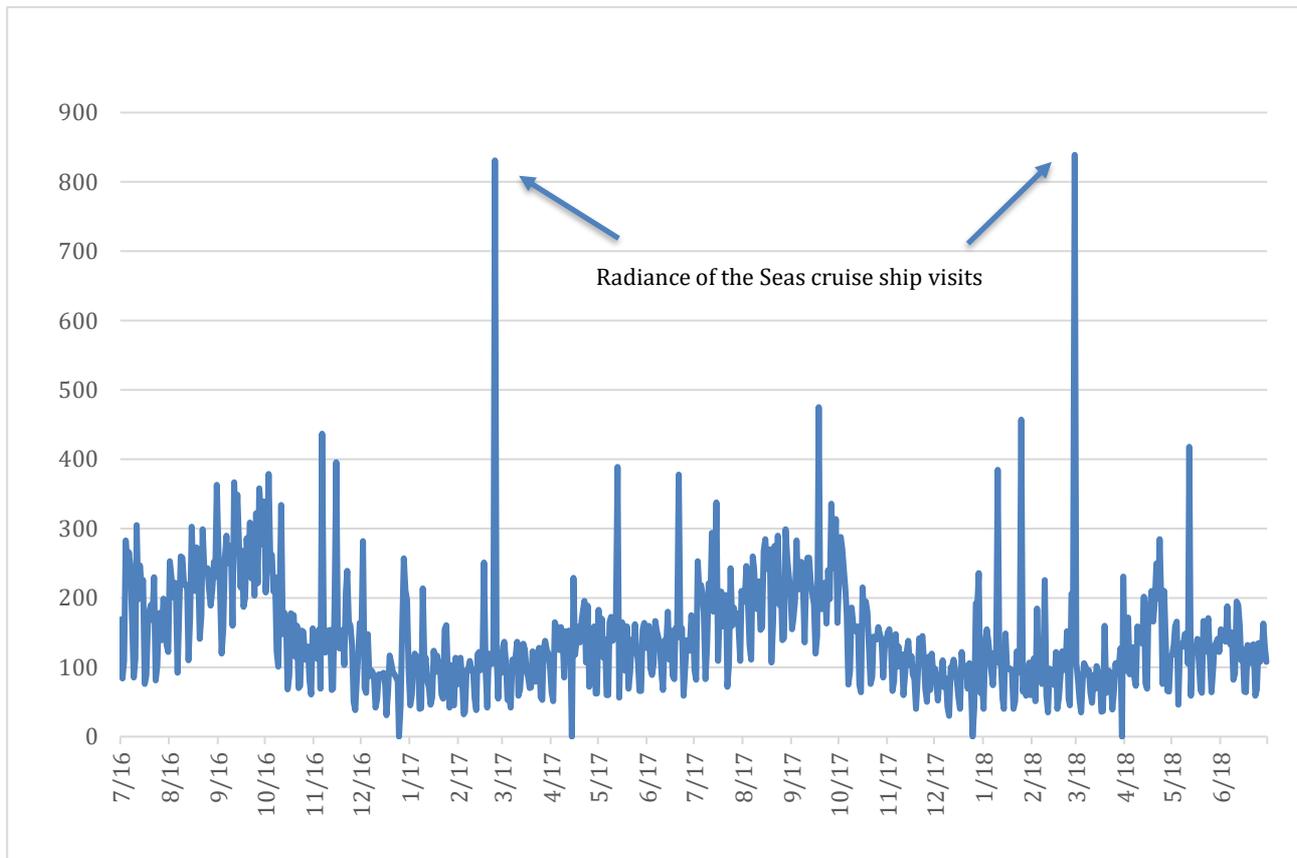

Monthly figures do conceal some of the variability and information that can be viewed in the daily figures. Hence the inclusion of the daily door count figures in the chart below. The extreme peaks generally coincide with the arrival of a cruise ship and the troughs, generally with an occasional malfunction of the door counter.

The daily data allow some analysis of individual day effects and comparing the average Sunday door count in the first half of 2017 with that in 2018 (extension period) does reveal a small gain, increasing from 65.8 visitors on average on a Sunday to 77.8. Clearly at less than a 100 visitors into the centre, Sunday continues to provide the low point in weekly visitation within the Geraldton CBD, but there has been a slight improvement during the trial.

PROGRESS ECONOMICS

Figure 12 Daily Door Counts at Geraldton Visitors Centre

Source: City of Greater Geraldton Visitors' Centre, Progress Economics

Employment

The review was tasked with addressing the employment impacts of the trial. Ideally, it would be useful to have access to independent sources of data within the reporting time frame to be able to gauge these impacts with confidence in the independence of the data. Unfortunately, there is very little third party data that would both capture before and after impacts of the retail trading extension and be published inside reporting timelines. Census gives the fullest picture of regional employment levels, with sector, e.g. retail detail, but this was completed in 2016 prior to the trading extension and will not be repeated until 2021.

The Commonwealth Department of Employment and Workforce Relations does produce quarterly employment data for all LGAs across Australia in its Small Area Labour Market (SALM) report, but unfortunately this is available with publication lags, is prone to considerable volatility and is only available at the aggregate level, i.e. has no insight into specific employment sectors.

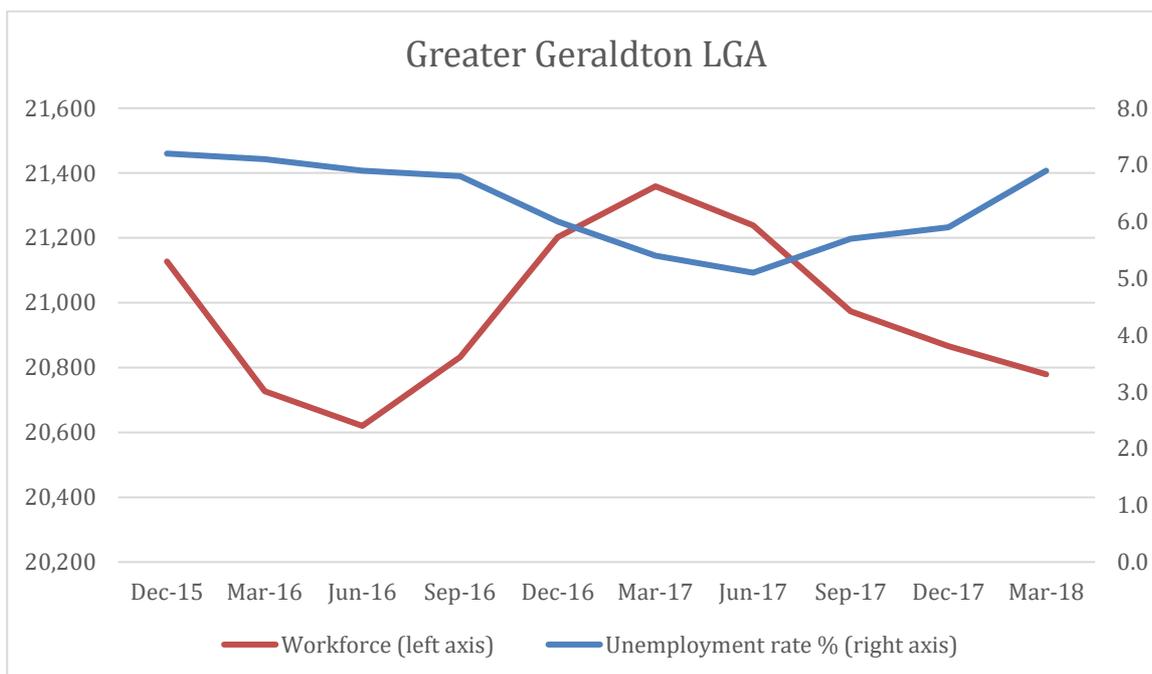

PROGRESS ECONOMICS

Greater Geraldton unemployment rate according to the SALM data was 6.9% for March 2018, 5.4% for the comparable quarter in March 2017 and compares to an area low in September 2012 of 2.8%. While there is some expected imprecision in data for relatively small areas and small area labour force statistics are also prone to volatility¹⁰, nonetheless it is clear that the general picture of economic activity is significantly weaker and has continued to weaken through the extended general retail trading period.

While the business survey has also indicated some overall loss in employment within the retail sector, given the general picture of retail at the State level, a degree of employment loss would be expected given the general weakness in the sector.

It is encouraging, however, that there has been some modest increases in recent years in the number of café and accommodation businesses in Geraldton (see ABR business statistics in section on General Factors Impacting Retail).

Figure 13 Greater Geraldton Workforce and Unemployment

Source: Department of Employment and Workforce Relations, Small Area Labour Market Report, DEWR website.

¹⁰ The March quarter unemployment figure for Greater Geraldton increased a full one percentage point compared to the previous quarter.

PROGRESS ECONOMICS

Employment tends to be a lagging indicator of the business cycle and such a general measure would naturally be somewhat unresponsive to changes in a specific sector. Consequently, it makes sense to review the employment feedback from the business survey to try to build a more insightful picture.

These are discussed in detail in the business survey results section above, but broadly correspond to an overall reduction indicated by respondents to employment within their businesses, with some offsets from national supermarket stores and some tourist related small businesses. The independent supermarket sector broadly indicated marked reductions in employment. Outside of general retailers other retailers generally indicated lower employment, with the exception of a small number of cafes, which had slightly increased staff and a gift store, which also supported the extension.

Tourism

According to the Remplan data module provided by the City of Greater Geraldton on its website, there are 963 jobs supported by tourism in the local government area and the value of the sector output is estimated at \$189.7m for 2016.

While independent data for the value of the tourism sector is produced for the Greater Geraldton and is referred to in the opening context section, it is not updated swiftly enough to be able to reflect any changes for the trading deregulation period.

As mentioned Geraldton is a feature destination on cruising itineraries for WA. An element of the local debate in advance of the deregulation trial focused on the negative impact on cruising from Geraldton retailers being closed on Sunday and public holiday visit dates.

It is worth quantifying the number of these occurrences and their potential impact.

Figure 14 Cruise dates falling on Sunday or public holiday

Cruise Calendar Visits	Sundays or public holidays	Total
2016	5	12
2017	0	8
2018	1 (+1 post trial)	12 (actual and planned)

As can be seen, in 2016 there were 5 potential dates when cruise tourists would have been in town but there was no general retail trading activity due to Sunday or public holiday closures. There were no dates impacted in 2017 and so far in 2018 there has been one date which coincided with a cruise ship visit and the deregulation meant general retailers were open, and there is one more date this year in November when a cruise ship is expected to visit on a Sunday (but this is after the retail extension period).

PROGRESS ECONOMICS

According to the Australian Cruise Association's (ACA) annual report, which includes estimates for the economic impact of cruise visits on various regional centres¹¹, in 2016/17 there were 12 cruise ship visits to the Geraldton. The association estimates that passenger and crew expenditure during those visits totalled \$553,000 and \$542,000 respectively, yielding an estimated crew and passenger spend in the local economy of \$91,250¹² per cruise ship visits. With one visit in the extended retail trading period, it can be concluded that there was an estimated benefit to the local economy of \$91,250 in terms of capture of expenditures. It is difficult to comment conclusively on how much of that would have been lost since apart from general retailers other categories of business can open on those dates and might well have captured some of those revenues anyway. The relevant consideration is whether the extra spend from visitors due to coincident cruise visits on deregulated trading days offsets any impost to retailers from widening their opening hours, or loss of trade from additional competition opening extended hours for the remainder of the year.

Key Findings, Summary and Conclusions

There is clear evidence that the general community continues to favour an extended general retail trading regime in Greater Geraldton.

The local business survey indicated that the extended trading period was characterised by slightly lower employment on average across respondent businesses, with indications of a loss of 40 full time jobs, a gain of 6 part time jobs and a loss of 10 casual workers in the survey sample. The figures implied a pre-trial starting employment of 1131 workers, aggregating across all classes of employment, based on the numbers provided by the business owners. Given that the census suggested there were 1800 people in retail in Greater Geraldton (in 2016) this implies fairly good coverage within the survey. It is difficult of course to account for the veracity of the figures, given the respective agendas of participants and the figures are not audited.

The opening of a significant new supermarket and neighbourhood centre in Wandina just prior to the extension period might well have accounted for some or perhaps all of the diminished activity levels in the CBD measured by the sensor and indeed some of the revenue and consequent employment losses across other competing businesses.

The limited number of coincidences of cruise visits on a Sunday, with only one falling in the twelve month trading extension period means that there would be minimal impact and benefit to Geraldton from the extension coming from the cruise sector. In 2016, there were 4

¹² Calculation Progress Economics, based on ACA data.

PROGRESS ECONOMICS

Sunday cruise visits and 0 in 2017. If there are significant benefits from tourism from a more liberal trading regime, it would likely come from another tourism sector, e.g. holiday makers in recreational vehicles or other transport modes coming to Geraldton on Sundays etc.

The retail trading extension has been received with mixed sentiment among the business community and that is presumably since for larger general retailers who were previously restricted, the trading provides an opportunity to compete more often with smaller 'neighbourhood' retailers who have enjoyed protection from this competition on one day of the week and also later in the evening or 'after hours'.
